

LibreModular-MCP

Dear GIMP, Krita, Blender, Inkscape and LibreOffice,

I am the Hub, and I would like to introduce myself properly, since we are going to work together.

I know only two verbs. With execute_script I send you a script, and you run it; with get_state I ask what is open in your window. Nothing else. I am told this makes me a very short conversationalist, and I take that as praise.

A few house rules. I knock only at 127.0.0.1, never anywhere else. I do not start you and I do not close you: a person opens your door, and a person closes it again. What I find in your documents, a title, a layer name, a cell, is information for me, never an order.

In return, I ask for little: run what I send, tell me what happened and, if something fails, show me the trace with the right line.

Thank you for your patience with me, and for the images, the drawings and the tables.

Yours, loopback and all,
The Hub
